SECTION 1.1 — HERO

Headline:

Your Business Deserves a Team That Never Sleeps

Subheadline:

We build AI Employees, high-performance digital presences, and custom software that move your business forward — without the overhead that slows it down.

Primary CTA	Schedule a Consultation
Secondary CTA	See How It Works

SECTION 1.2 — PAIN POINT BLOCK

Headline:

Most businesses are leaving money on the table — and they know it.

Body:

You're running a team. Deadlines are piling up. Good talent is expensive and hard to hold onto. Your website isn't pulling its weight. And the software you're using was built for someone else's business, not yours.

Cloudex was built for exactly this moment. We bring together AI-powered workforce solutions, digital growth expertise, and purpose-built software — so you can stop patching problems and start scaling properly.

SECTION 1.3 — CAPABILITIES OVERVIEW

Header: Three Capabilities. One Partner.

AI Solutions AI Employees and AI Native Products Deploy intelligent AI Employees that handle your sales outreach, customer queries, financial reporting, marketing execution and more — around the clock, without error.	Digital Growth Websites That Actually Bring Business We build high-converting business websites and drive search visibility so your ideal clients find you before they find anyone else.	Custom Software Software Built Around You No off-the-shelf compromise. We design and build software tailored to how your business actually works.
---	---	--

SECTION 1.4 — AI EMPLOYEES FEATURE HIGHLIGHT

Headline: Meet Your New AI Employee

Think about what your best team member does on their best day. Now imagine that happening consistently, across every department, 24 hours a day.

That is what an AI Employee delivers.

Not a chatbot. Not a simple automation. A fully operational Digital FTE (Full Time Equivalent) that slots into your team and gets to work — handling tasks your business needs done without adding to your payroll pressure.

► See What an AI Employee Can Do

SECTION 1.5 — INDUSTRIES SERVED

Headline: We work across the industries that move the economy.

- Healthcare
- Financial Services
- E-Commerce
- Real Estate
- Legal & Professional
- SaaS & Technology
- Education
- Hospitality & Travel
- Manufacturing & Logistics
- Marketing Agencies

SECTION 1.6 — WHY CLOUDEX

Headline: What Makes Working With Us Different

Outcomes First

We do not charge for effort. Every solution we build is tied to a real business outcome — more leads, more efficiency, lower cost, or faster delivery.

No Black Boxes

You will always know what we are building, why, and how it works. Transparency is not optional here.

Built to Scale

Whether you are a growing business or an established enterprise, everything we deliver is designed to scale with you.

One Team, Full Capability

AI, development, and digital growth under one roof means no handoffs to agencies who do not understand your tech stack, and no developers who do not understand your business.

SECTION 1.7 — TESTIMONIALS

Headline: What Our Clients Say

"Within 90 days of working with Cloudex, our inbound leads doubled. The combination of a new website and their search visibility work changed the business."

— Director, UK-based Financial Advisory Firm

"We were sceptical about AI Employees at first. Now we could not imagine running our sales process without one. It handles everything our SDR team used to do — and it does it better."

— Head of Sales, SaaS Company

"The custom software they built replaced three tools we were paying subscriptions for. It pays for itself every month."

— Operations Manager, E-Commerce Brand

SECTION 1.8 — CONTACT CTA BAND

Ready to see what Cloudex can do for your business?

Page 2: About

SECTION 2.1 — HERO

Headline:

We started Cloudex because too many businesses were being left behind.

The tools that give large enterprises a competitive edge — AI, intelligent automation, world-class digital infrastructure — were out of reach for most businesses. Either too expensive, too complex, or locked inside agencies that did not fully understand how businesses actually operate.

We built Cloudex to change that.

SECTION 2.2 — WHO WE ARE

Headline: A team of builders, strategists, and problem solvers.

Cloudex Technologies is a UK-based technology company specialising in AI workforce solutions, digital growth, and custom software development.

We work with founders, directors, and operations leaders who are serious about growth — and who want a technology partner, not just a vendor.

SECTION 2.3 — OUR PHILOSOPHY

Headline: We build things that work. Quietly. Consistently. Measurably.

We are not interested in impressive demos that do not translate to real results. We are not impressed by technology for its own sake.

What drives us is the moment when a client tells us their team has stopped wasting three hours a day on something we automated. Or when their phone starts ringing from website visitors who would have gone to a competitor six months ago.

SECTION 2.4 — VALUES

Headline: What We Stand For

Honesty over sales

We will tell you when something is not the right fit — even if that means turning down work.

Depth over breadth

We focus on three capabilities and we go deep. You get expertise, not generalism.

Partnership over transaction

The businesses we serve grow over time. Our relationships grow with them.

Results over activity

We measure success by what changes in your business, not by how much we delivered.

► [Book a Call](#)

Page 3: Capabilities — AI Solutions

SECTION 3.1 — HERO

Headline: AI that works inside your business, not alongside it.

There is a lot of noise around AI right now. Most of it is theoretical. What Cloudex delivers is practical: AI Employees that fill real operational roles, and AI-native products built to solve specific business problems from the inside out.

SECTION 3.2 — WHAT WE BUILD

Headline: Two Ways We Apply AI for Your Business

AI Employees (Digital FTEs)	AI Native Products
Deployable AI roles that plug into your existing teams and workflows. A Digital FTE for your sales team handles prospecting and outreach. One for marketing manages content scheduling, reporting and campaign execution. One for finance monitors cashflow, generates reports and flags anomalies.	Beyond individual employees, we design and build AI-native products — tools where intelligence is not an add-on but the foundation. If you have a product idea that needs to operate intelligently at its core, we build it from the ground up with AI as its architecture.

SECTION 3.3 — HOW IT WORKS

Headline: From Brief to Deployed in Weeks, Not Months

Step 1 — Discovery

We map your workflows, identify the roles best suited for an AI Employee, and agree on clear performance criteria.

Step 2 — Design

We design the AI Employee's role scope, decision logic, integrations, and escalation paths.

Step 3 — Build and Test

We build, configure and test the solution in a controlled environment before any deployment.

Step 4 — Deploy and Handover

We deploy to your environment, train your team on oversight, and remain available for iteration.

► [Talk to Us](#)

Page 4: AI Employees / Digital FTE

★ **FLAGSHIP PAGE — Highest Priority**

SECTION 4.1 — HERO

Headline: Your First AI Employee Is Ready to Start Monday

Subheadline: A Digital FTE (Full Time Equivalent) does not need onboarding months. It does not call in sick. It does not forget the process. And it starts delivering from day one.

► **See What They Can Do**

SECTION 4.2 — THE CONCEPT EXPLAINED

Headline: What Exactly Is an AI Employee?

An AI Employee — or Digital FTE — is a fully configured, operationally ready AI system that takes on a defined role inside your business.

This is not a chatbot sitting on your website answering FAQs. This is not a workflow trigger that sends an email when a form is filled in.

A Digital FTE is built to perform a job. It has a scope of work. It makes decisions within that scope. It uses your tools, operates in your systems, communicates in your brand voice, and produces work your team can act on.

Think of it as the equivalent of hiring a highly skilled team member — except this one works 24 hours a day, scales without friction, and costs a fraction of a full-time salary.

SECTION 4.3 — THE DIGITAL FTE ROSTER

Headline: Meet the Roles We Deploy

Sales AI Employee — The Prospector

What it does:

Identifies and researches ideal prospects, crafts personalised outreach sequences, manages follow-up cadences, qualifies inbound leads and books meetings directly into your calendar.

Who it replaces or supports:

SDRs, BDRs, lead generation teams, appointment setters.

What your team gets back:

Your closers stop chasing cold leads and start showing up to warm conversations.

Marketing AI Employee — The Campaign Engine

What it does:

Plans and schedules content across your channels, manages campaign execution, monitors performance and produces regular reports with clear insights. Also handles email marketing, social scheduling and ad performance tracking.

Who it replaces or supports:

Marketing coordinators, content schedulers, campaign managers.

What your team gets back:

Your senior marketers spend their time on strategy, not execution.

Customer Support AI Employee — The First Responder**What it does:**

Handles inbound customer queries across email, chat and messaging channels. Resolves common issues, escalates complex ones with full context, and ensures no query goes unanswered.

Who it replaces or supports:

First-line support agents, helpdesk coordinators.

What your team gets back:

Faster response times, happier customers, and a support team focused on the cases that actually need human judgement.

Finance AI Employee — The Numbers Operator**What it does:**

Monitors cashflow, generates financial summaries and reports, tracks invoices and payment status, flags anomalies and assists with budget tracking.

Who it replaces or supports:

Finance administrators, bookkeeping support, reporting analysts.

What your team gets back:

Real-time financial visibility without manual spreadsheet work.

Operations AI Employee — The Process Keeper**What it does:**

Monitors operational workflows, tracks KPIs across departments, manages task routing, ensures deadlines are tracked and escalates blockers before they become problems.

Who it replaces or supports:

Operations coordinators, project administrators.

What your team gets back:

An operations layer that runs quietly in the background, keeping everything moving.

HR and Talent AI Employee — The People Coordinator**What it does:**

Manages recruitment pipeline admin, candidate communication, interview scheduling, onboarding task management and internal HR documentation.

Who it replaces or supports:

HR coordinators, recruitment administrators.

What your team gets back:

A hiring process that is faster, more consistent and less admin-heavy.

SECTION 4.4 — CUSTOM DIGITAL FTES

Don't see your role listed?

Every business has unique operational roles that do not fit a standard template. If your biggest inefficiency is specific to how you work, we build a custom Digital FTE around it.

We have deployed AI Employees for bid writing, compliance monitoring, data enrichment, partner communications and more.

► [Tell Us What You Need](#)

SECTION 4.5 — BUILD PROCESS

Headline: The Cloudex Build Process

Stage 1 — Role Mapping (Week 1)

We spend time understanding the role in detail. What decisions does it make? What inputs does it need? What does good output look like? What should it escalate?

Stage 2 — Integration Design (Week 1–2)

We map which of your existing tools and systems the AI Employee will connect to — your CRM, inbox, calendar, reporting tools, communication platforms.

Stage 3 — Configuration and Training (Week 2–3)

We configure the AI Employee with your brand voice, business context, process logic and decision rules.

Stage 4 — Testing (Week 3–4)

We run the AI Employee in a controlled environment, test edge cases and refine responses until output quality meets the agreed standard.

Stage 5 — Deployment and Handover (Week 4)

We deploy to your live environment and give your team a full handover — how to monitor, how to update instructions, and how to expand its scope over time.

SECTION 4.7 — ROI FRAMING

Headline: The Business Case Is Simple

A mid-level operational hire in the UK costs between £28,000 and £45,000 per year before taxes, benefits, equipment, management time and recruitment fees.

A Digital FTE handles a comparable scope of work at a fraction of that cost — without turnover, without sick days, without training from scratch every time someone leaves.

The businesses we work with typically see measurable efficiency gains within the first 30 days of deployment.

► [Book Your AI Consultation](#)

Page 5: Capabilities — Digital Growth

SECTION 5.1 — HERO

Headline: Your digital presence should be working as hard as you are.

Most business websites look decent. But looking decent and actually bringing in business are two very different things. We build digital presences that do the second one.

SECTION 5.3 — SERVICES

High-Performance Business Websites

A website that represents your business properly, loads fast, works on every device, and is built to turn visitors into enquiries. Every site we build is designed around the way your customers think and what they need to see before they pick up the phone.

Search Visibility

A technical and strategic approach to search that puts your business in front of people actively looking for what you offer. We cover on-page optimisation, technical SEO, content strategy, and local search.

Conversion Optimisation

We review how your existing traffic is behaving, identify where visitors are dropping off, and make targeted changes that improve the percentage of visitors who take action.

Digital Audit

A full picture of where your current digital presence is underperforming, with a prioritised action plan to fix it.

SECTION 5.4 — WHO THIS IS FOR

You might need Digital Growth if:

- Your website looks fine but does not generate leads
- You are invisible in search results for your main services
- Competitors with inferior services are outranking you online
- You cannot tell how many customers your website actually generates
- Your last website redesign did not move the commercial needle

► [Get a Free Digital Audit](#)

Page 6: Capabilities — Custom Software Development

SECTION 6.1 — HERO

Headline: Software that fits your business. Not the other way around.

Most businesses are using tools that were built for someone else. They adapt their processes to fit the software. We build the software to fit the process.

SECTION 6.2 — WHAT WE BUILD

Business Operations Software

Internal platforms that handle your core workflows — dashboards, management tools, reporting systems, workflow automation and internal data tools.

Client-Facing Web Applications

Portals, self-service platforms, booking systems, client dashboards and anything your customers interact with directly.

Integrations and Data Pipelines

Connecting your existing tools so they share data cleanly, automating data flows and replacing manual transfers between systems.

AI-Native Products

Products built from the ground up with intelligence as their core — whether that is a recommendation engine, an analytics platform or a fully AI-driven application.

SECTION 6.4 — TECH STACK

Frontend	React, Next.js, TypeScript
Backend	Node.js, Python, REST APIs
Database	PostgreSQL, Supabase, MongoDB
Cloud	AWS, Vercel, GCP
AI / ML	OpenAI, Anthropic, LangChain, custom model integration
